

```
In [1]: #1 PyInputPlus is not a part of the Python Standard Library.

In [2]: #2 You can import the module with import pyinputplus as pyip so that
        #you can enter a shorter name when calling the module's functions.

In [3]: #3 The inputInt() function returns an integer, while the inputFloat() function returns

In [4]: #4 A By using pyip. inputint(min=1, max=100) B.

In [5]: #5 keyword arguments take a list of regular expression strings to
        #determine what the PyInputPlus function will accept or reject as valid input.

In [6]: #6 It will throw RetryLimitException exception.

In [ ]: #7 Blank values are not allowed.
```
